

Fluent 链式验证多语言

```
ValidatorOptions.Global.LanguageManager = new  
Extensions.Validators.CustomLanguageManager();
```

属性名称本地化

```
IStringLocalizerFactory? localizerFactory =  
app.ApplicationServices.GetService<IStringLocalizerFactory>();  
  
FluentValidation.ValidatorOptions.Global.DisplayNameResolver = (type, memberInfo,  
lambdaExpression) =>  
{  
    string? displayName = string.Empty;  
  
    DisplayAttribute? displayColumnAttribute =  
memberInfo.GetCustomAttributes(true).OfType<DisplayAttribute>().FirstOrDefault();  
  
    if (displayColumnAttribute is not null)  
    {  
        displayName = displayColumnAttribute.Name;  
    }  
  
    DisplayNameAttribute? displayNameAttribute =  
memberInfo.GetCustomAttributes(true).OfType<DisplayNameAttribute>  
().FirstOrDefault();  
  
    if (displayNameAttribute is not null)  
    {  
        displayName = displayNameAttribute.DisplayName;  
    }  
  
    if (!string.IsNullOrEmpty(displayName) && localizerFactory is not  
null)  
    {  
        return localizerFactory.Create(type)[displayName];  
    }  
  
    if (!string.IsNullOrEmpty(displayName))  
    {  
        return displayName;  
    }  
}
```

```
        return memberInfo.Name;  
    };
```
